Mitigation and Evaluation* -
Hirokazu Takemiya 2021-06-24
Globally there is much interest
in environmental vibrations, as
caused by all forms of traffic,
by construction activities and
factory operations, and by
other man-made sources. The
focus is on prediction, control

The debate over how far governments should intervene in economies in order to promote economic growth, a debate which from the 1980s seemed settled in favour of the neo-liberal, non-interventionist consensus, has taken on new

vigour since the financial crisis of 2008 and after. Some countries, most of them in industrialised Asia, have survived the crisis, and secured equitable economic growth, by adopting a developmental state model, whereby governments have intervened in their economies, often through explicit support for individual companies. This book explores debates about government intervention, assesses interventionist policies, including industrial and innovation policies, and examines in particular the key institutions which play a crucial role in implementing government policies and in building the bridge between the state and the private sector. The countries covered include China, India, South Korea, Malaysia and Taiwan, together with representative countries from Europe and Latin America.

Service-Oriented Mapping - Jürgen Döllner 2018-06-07

This book gathers various perspectives on modern map production. Its primary focus is

on the new paradigm of “sharing and reuse,” which is based on decentralized, service-oriented access to spatial data sources. Service-Oriented Mapping is one of the main paradigms used to embed big data and distributed sources in modern map production, without the need to own the sources. To be stable and reliable, this architecture requires specific frameworks, tools and procedures. In addition to the technological structures, organizational aspects and geographic information system (GIS) capabilities provide powerful tools to make modern geoinformation management successful. Addressing a range of aspects, including the implementation of the semantic web in geoinformatics, using big data for geospatial visualization, standardization initiatives, and the European spatial data infrastructure, the book offers a comprehensive introduction to decentralized map production. .

The Mechanics of Threaded Fasteners and Bolted Joints for Engineering and Design -

Toshimichi Fukuoka

2022-10-22

The Mechanics of Threaded Fasteners and Bolted Joints outlines how threaded

fasteners and bolted joints fail, how these failures can be remedied, and ultimately how to avoid them altogether through tightening methods, material strength, and avoiding loosening. The book demonstrates how to select the appropriate tightening method and determine the optimal tightening procedure for varying nominal diameters. Using the finite element method, it discusses characteristics of stress concentration and fatigue strength and covers bolt force variation due to elastic interaction. The separation of the plate interface via increased external force as the primary cause of fatigue failure in threaded fasteners is discussed, with effective countermeasures provided. Empirical equations of thermal contact coefficient and apparent thermal contact coefficient in simple form are included as well. Outlines various tightening methods such as torque control, angle control, direct tension, and thermal expansion

Demonstrates methods for preventing fatigue failure
Discusses the effect of high and low temperature thermal loads on the strength of bolted joints by looking at thermal contact resistance at the interface

Adhesives for Wood and Lignocellulosic Materials - R. N. Kumar 2019-07-16

The book is a comprehensive treatment of the subject covering a wide range of subjects uniquely available in a single source for the first time.

A material science approach has been adopted in dealing with wood adhesion and adhesives. The approach of the authors was to bring out hierarchical cellular and porous characteristics of wood with polymeric cell wall structure, along with the associated non-cell wall extractives, which greatly influence the interaction of wood substrate with polymeric

adhesives in a very unique manner not existent in the case of other adherends.

Environmental aspects, in particular formaldehyde emission from adhesive bonded wood products, has been included. A significant feature of the book is the inclusion of polymeric matrix materials for wood polymer composites.
