Writings on Medicine - Georges Canguilhem
2012

At the time of his death in 1995, Georges Canguilhem was a highly respected historian of science and medicine, whose engagement with questions of normality, the ideologization of scientific thought, and the conceptual history of biology had marked the thought of philosophers such as Michel Foucault, Louis Althusser, Pierre

Bourdieu, and Gilles Deleuze. This collection of short, incisive, and highly accessible essays on the major concepts of modern medicine shows Canguilhem at the peak of his use of historical practice for philosophical engagement. In order to elaborate a philosophy of medicine, Canguilhem examines paramount problems such as the definition and uses of health, the decline of the Hippocratic understanding of nature, the experience of disease, the limits of psychology in medicine, myths and realities of therapeutic practices, the difference between cure and healing, the organism's self-regulation, and medical metaphors linking the organism to society. Writings on Medicine is at once an excellent introduction to Canguilhem's work and a forceful, insightful, and accessible engagement with elemental concepts in medicine. The book is certain to leave its imprint on anthropology, history, philosophy, bioethics, and the social studies of medicine.

Local Flaps in Head and Neck

Reconstruction - Ian T. Jackson 2007-06-30

This book is truly a classic, beloved by plastic surgeons throughout the world. Its strength lies in its simple, elegant approach to solving common reconstructive problems encountered by plastic surgeons at all levels of training. Its appeal transcends specialty interests, with aesthetic and reconstructive surgeons alike finding this book to be an invaluable resource for daily practice. Its comprehensive coverage makes it an essential addition to any surgeon's library. Totally revised and updated with color throughout, this new edition has been totally revised and updated with over 150 additional pages, two new chapters, and numerous new cases, flaps, and problems. Additionally, there are color illustrations, summary tables highlighting the best flaps for various clinical situations, annotated bibliographies, and much, much more. Throughout these pages, the reader benefits from Dr. Jackson's enormous experience and wisdom as he makes note of special tips,

critical maneuvers, and important principles that warrant emphasis. Each flap is accompanied by a description of potential problems, and each anatomic area for reconstruction ends with a technique of choice so that the reader can understand the decision-making process that is involved in flap selection. The book begins with a chapter on basic principles, which reviews the important oncologic concerns that must precede any reconstructive-surgery procedure. Principles of tissue movement and flap design are accompanied by drawings that aid the reader in planning. The next seven chapters address each anatomic region. Alternate methods for closing defects in each region are presented. Both simple and complex solutions are detailed. Each reconstructive option is presented in great detail with operative photos as well as beautiful illustrations to depict flap design, elevation, and closure, and to more clearly explicate complex flap reconstructions for difficult problems. Common mistakes and the limitations of each

flap are clearly delineated. Chapters on each anatomic region conclude with new summary tables that help the reader quickly identify the best reconstructive options for specific problems. Two Totally New Chapters The final two chapters are new to this edition-Tissue Expansion and Problems and Complication. The chapter on tissue expansion fully details the advantages to be gained from tissue expansion and the applications in each area of the head and neck when local flaps are planned. The Problems and Complications chapter covers common problems encountered in head and neck reconstruction as well as avoidance and treatment of complications should they occur. It concludes with a section on tricks and innovations, which discusses diverse topics such as the use of scarlet red for wound healing, the aesthetic repair of torn earlobes, and the repair of cocaine-induced palatal fistula. There is clearly a wealth of information and much to be learned and applied by surgeons at all levels of

expertise.

The Inflammatory Process - Benjamin W.

Zweifach 2014-05-12

The Inflammatory Process focuses on the approaches, methodologies, and technologies involved in the study of the inflammatory process, including capillary structure, tissue injury, and inflammatory response. The selection first offers information on the experimental approach to inflammation, ultrastructural and biochemical consequences of cell injury, and ultrastructural basis of capillary permeability. Discussions focus on permeability of capillaries, cytoplasm, nucleus, gross pathology of inflammation, light microscope and the study of inflammation, and the physiologic approach to problems of inflammation. The text then elaborates on the microvascular aspects of tissue injury and the sticking and emigration of white blood cells in inflammation. The book examines neutrophil and eosinophil leucocytes, "life history" and functions of lymphocytes, and

metabolism and physiology of mononuclear phagocytes. Topics include inflammatory response, biochemistry and metabolism, special relationships to bacteria and viruses, and origins and early development of lymphocytes. The text also ponders on the role of lysosomes in tissue injury, hemostatic mechanisms in tissue injury, and anti-inflammatory agents. The selection is a vital source of data for researchers interested in the inflammatory process.

[The Rise of Homo Sapiens](#) - Frederick L. Coolidge 2009-04-13

The Rise of Homo Sapiens: The Evolution of Human Thinking presents a provocative theory about the evolution of the modern mind based on archaeological evidence and the working memory model of experimental psychologist Alan Baddeley. The book explains the mystery of the disappearance of the Neandertals and the ascendancy of modern Homo sapiens - and whether this was at the expense of the Neandertals. The Rise of Homo Sapiens has been written to introduce scientists and students to the fascinating interface between the worlds of archaeology and cognitive science, and argues that the evolution of modern thinking occurred in two major leaps; the advent of Homo erectus over 1.5 million years ago, and a final enhancement of working memory capacity

sometime within the last 200,000 years. The authors argue that highly ritualized burials, personal ornaments, cave art and highly creative figurines, and age and gender divisions of economic labor, all of which were characteristic of Homo sapiens about 30,000 years ago, were clearly products of their cognitive functions, e.g., central executive functions. Neandertals, living at the same time, had virtually none of these cultural products despite larger brains! This is the first book to explain elaborately how thinking differences between Homo sapiens and Neandertals may have accounted for the ultimate demise of Neandertals. Cognitive archaeology is a quickly growing discipline yet archaeologists have been slow to adopt current theories, models, and findings within contemporary cognitive science. The Rise of Homo Sapiens will serve as a unique introduction and primer into both disciplines. *Nursing Interventions Classification (NIC) - E-Book* - Howard K. Butcher 2013-12-27
