[Seafood Enzymes](#) - Norman F. Haard 2000-02-25
"Reviews specific enzymes and enzyme groups studied in recent years, delves into the

relationship between enzymes and seafood quality, covers the application of enzymes as seafood processing aids, and focuses on the recovery of useful enzymes as by-products from seafood waste. Details the control of enzyme

activity in seafood products."

*Web and Wireless Geographical Information
Systems* - Katsushi Tanaka 2011-02-17

This book constitutes the refereed proceedings
of the 10th International Symposium on Web and
Wireless Geographical Information Systems,
W2GIS 2011, held in Kyoto, Japan, in March
2011. A total of 13 full and 3 short papers plus 2
short keynote papers presented were carefully
reviewed and selected from 36 submissions. The

papers cover a wide range of topics including
geographic information retrieval on the web,
geo-spatial semantic and sensor web, location-
based services, advanced GIS visualization
techniques, personalization and adjustment for
mobile GIS applications, and geo-spatial data
quality and context processing.

Concrete in the Service of Mankind -
Ravindra Dhir 2003-09-02

Concrete is ubiquitous and unique, found in
every developed and developing country. Indeed,
there are no alternatives to concrete as a volume
construction material for infrastructure. This
raises important questions of how concrete
should be designed and constructed for cost
effective use in the the short and long term, and
to encourage further radical development.
Equally, it must be environmentally friendly
during manufacture, in an aesthetic presentation

in structures and in the containment of harmful materials.; The central theme of the Congress is Concrete in the Service of Mankind, under which five self-contained Conferences, each dealing with a particular aspect, are planned. The Congress offers opportunity to discuss how to improve and extend this service to mankind using responsible exploitation, underwritten by sound technical understanding and research base. It brings together the shared skills and experience of the various disciplines involved in the construction process world wide.; This major publication continues the tradition established by Dundee University of organizing major international conferences every three years dealing with some aspect of concrete and also the link between Spon and Dundee University for publication of the proceedings.; This book should be of interest to concrete technologists; contractors; civil engineers; consultants; government agencies; research organizations.

Metalanguages for Dissecting Translation Processes - Rei Miyata 2022-06-10

This edited volume covers the development and application of metalanguages for concretely describing and communicating translation processes in practice. In a modern setting of project-based translation, it is crucial to bridge the gaps between various actors involved in the translation process, especially among clients, translation service providers (TSPs), translators, and technology developers. However, we have been confronted with the lack of common understanding among them about the notion and detailed mechanisms of translation. Against this backdrop, we are developing systematic, fine-grained metalanguages that are designed to describe and analyse translation processes in concrete terms. Underpinned by the rich accumulation of theoretical findings in translation studies and established standards of practical translation services, such as ISO 17100, our metalanguages extensively cover the

core processes in translation projects, namely project management, source document analysis, translation, and revision. Gathering authors with diverse backgrounds and expertise, this book proffers the fruits of the contributors' collaborative endeavour; it not only provides practicable metalanguages, but also reports on wide-ranging case studies on the application of metalanguages in practical and pedagogical scenarios. This book supplies concrete guidance for those who are involved in the translation practices and translation training/education. In addition to being of practical use, the metalanguages reflect explication of the translation process. As such, this book provides essential insights for researchers and students in the field of translation studies.

Advances in Intelligent Networking and Collaborative Systems - Fatos Xhafa 2018-08-25
This book provides the latest research findings, and discusses, from both theoretical and practical perspectives, innovative research methods and development techniques related to intelligent social networks and collaborative systems, intelligent networking systems, mobile collaborative systems and secure intelligent cloud systems. It also presents the synergies among various paradigms in such a multi-disciplinary field of intelligent collaborative

systems. With the rapid development of the Internet, we are experiencing a shift from the traditional sharing of information and applications as the main purpose of the Web to an emergent paradigm, which locates people at the very centre of networks and exploits the value of individuals' connections, relations and collaboration. Social networks are also playing a major role in the dynamics and structure of intelligent Web-based networking and collaborative systems. Virtual campuses, virtual communities and organizations strongly leverage intelligent networking and collaborative systems by means of a great variety of formal and informal electronic relations, such as business-to-business, peer-to-peer and various types of online collaborative learning interactions, including the emerging e-learning systems. This has resulted in entangled systems that need to be managed efficiently and autonomously. In addition, the latest, powerful technologies based on grid and wireless

infrastructure as well as cloud computing are currently enhancing collaborative and networking applications significantly, but are also facing new issues and challenges. The principal purpose of the research and development community is to stimulate research that will lead to the creation of responsive environments for networking and, in the longer term, the development of adaptive, secure, mobile, and intuitive intelligent systems for collaborative work and learning.

Advances in Biomembranes and Lipid Self-Assembly - 2016-04-01

The Elsevier book series *Advances in Biomembranes and Lipid Self-Assembly* (previously titled *Advances in Planar Lipid Bilayers and Liposomes*), provides a global platform for a broad community of experimental and theoretical researchers studying cell membranes, lipid model membranes, and lipid self-assemblies from the micro- to the nanoscale. Planar lipid bilayers are widely studied due to

their ubiquity in nature and find their application in the formulation of biomimetic model membranes and in the design of artificial dispersion of liposomes. Moreover, lipids self-assemble into a wide range of other structures including micelles and the liquid crystalline hexagonal and cubic phases. Consensus has been reached that curved membrane phases do play an important role in nature as well, especially in dynamic processes such as vesicles fusion and cell communication. Self-assembled lipid structures have enormous potential as dynamic materials ranging from artificial lipid membranes to cell membranes, from biosensing to controlled drug delivery, from pharmaceutical formulations to novel food products to mention a few. An assortment of chapters in this volume represents both original research as well as comprehensive reviews written by world leading experts and young researchers. Surveys recent theoretical and experimental results on lipid micro- and nanostructures Presents potential

uses of applications like clinically relevant diagnostic and therapeutic procedures, biotechnology, pharmaceutical engineering, and food products Provides both original research as well as comprehensive reviews written by world leading experts and young researchers Provides a global platform for a broad community of experimental and theoretical researchers studying cell membranes, lipid model membranes, and lipid self-assemblies from the micro- to the nanoscale.

Fundamentals of Picoscience - Klaus D. Sattler
2013-09-26

Now ubiquitous in public discussions about cutting-edge science and technology, nanoscience has generated many advances and inventions, from the development of new quantum mechanical methods to far-reaching applications in electronics and medical diagnostics. Ushering in the next technological era, *Fundamentals of Picoscience* focuses on the instrumentation and experiments emerging at the picometer scale. One picometer is the length of a trillionth of a meter. Compared to a human cell of typically ten microns, this is roughly ten million times smaller. In this state-of-the-art book, international scientists and researchers at the forefront of the field present the materials and methods used at the picoscale. They address the key challenges in developing new instrumentation and techniques to visualize and

measure structures at this sub-nanometer level. With numerous figures, the book will help you: Understand how picoscience is an extension of nanoscience Determine which experimental technique to use in your research Connect basic studies to the development of next-generation picoelectronic devices The book covers various approaches for detecting, characterizing, and imaging at the picoscale. It then presents picoscale methods ranging from scanning tunneling microscopy (STM) to spectroscopic approaches at sub-nanometer spatial and energy resolutions. It also covers novel picoscale structures and picometer positioning systems. The book concludes with picoscale device applications, including single molecule electronics and optical computers. Introductions in each chapter explain basic concepts, define technical terms, and give context to the main material.

Combinatorial Pattern Matching - Johannes Fischer 2013-05-16

This book constitutes the refereed proceedings of the 24th Annual Symposium on Combinatorial Pattern Matching, CPM 2013, held in Bad Herrenalb (near Karlsruhe), Germany, in June 2013. The 21 revised full papers presented together with 2 invited talks were carefully reviewed and selected from 51 submissions. The papers address issues of searching and matching strings and more complicated patterns such as trees, regular expressions, graphs, point sets, and arrays. The goal is to derive non-trivial combinatorial properties of such structures and to exploit these properties in order to either achieve superior performance for the corresponding computational problem or pinpoint conditions under which searches cannot be performed efficiently. The meeting also deals with problems in computational biology, data

compression and data mining, coding, information retrieval, natural language processing, and pattern recognition.

The Singapore Mathematics Calendar 2020 - Yan Kow Cheong

The Singapore Mathematics Calendar is a three-book series that provides an informal yet creative way for both parents and homeschoolers to support their child succeed in math. This calendar is designed in such a way that the answer to the problem on each day is the date on which the problem appears. Hints and solutions are also provided for nonroutine or brain-unfriendly questions. Besides, each month begins with some elements of enrichment or

recreational math. The Singapore Mathematics Calendar Series aims to convey the message that mathematics needn't be drill-and-kill exercises—it can be fun, yet challenging for students to be exposed to the beauty and joy of mathematics.

Multimedia Information Systems in Practice -

Wing S. Chow 1999

With the help of advanced technology in telecommunications, the benefits of multimedia applications have become even more significant than when it was used as just as a form for strategic advantage by individuals. The International Conference on Multimedia and Telecommunications Management, held December 17-19, 1998, highlights the recent significant research in the areas of multimedia and telecommunications applications in industry. This book collects the 58 reviewed papers from 18 countries, that were chosen out of 140

submissions for presentation at the conference. An introductory paper entitled "Multimedia in Facet: A Facet of Hong Kong Environment" by Wing S Chow et al., is included as an introductory chapter to render readers a better understanding of the study subjects. This volume is useful for researchers, practitioners and students alike for an update on the most recent developments in the ever-changing and significant field of multimedia and telecommunications.

Sakamoto's Swim Club - Julie Abery

2021-05-04

Lyricaly told true story of the teacher who coached Hawaiian swimmers to Olympic glory. When the children of workers on a 1930s Maui sugar plantation were chased away from playing in the nearby irrigation ditches, local science teacher Soichi Sakamoto had an idea. He would take responsibility for the children and train them to swim. Using his science background, Sakamoto developed a strict practice regime for the kids, honing their skills and building their strength and endurance. They formed a team and began to dominate events, first nationally and then internationally — until they made it all the way to Olympic gold! Told in simple rhyme, Sakamoto's story will inspire athletes, coaches — and everyone who believes impossible dreams can come true.

Advances in Internet, Data and Web

Technologies - Leonard Barolli 2019-02-05

This book presents original contributions on the theories and practices of emerging Internet, Data and Web technologies and their applications in businesses, engineering and academia. As a key feature, it addresses advances in the life-cycle exploitation of data generated by digital ecosystem technologies. The Internet has become the most proliferative platform for emerging large-scale computing paradigms. Among these, Data and Web technologies are two of the most prominent paradigms, manifesting in a variety of forms such as Data Centers, Cloud Computing, Mobile Cloud, Mobile Web Services, and so on. These technologies altogether create a digital ecosystem whose cornerstone is the data cycle, from capturing to processing, analysis and visualization. The need to investigate various research and development issues in this digital ecosystem has been made even more pressing by

the ever-increasing demands of real-life applications, which are based on storing and processing large amounts of data. Given its

scope, the book offers a valuable asset for all researchers, software developers, practitioners and students interested in the field of Data and Web technologies.
