General Health Perceptions - John E. Ware 1978

The fifth volume in a series reviewing published literature and documenting conceptualization and construction of health status measures used in the Health Insurance Study (HIS). Analyses reported are based on non-HIS sources; plans for analyzing HIS data from the Health Perceptions Questionnaire (HPQ) are documented. The HPQ contains six summated ratings scales reflecting perceptions of current, past, and future health, resistance-susceptibility, sickness orientation, and health worry/concern. These measures appear sufficiently reliable and valid for testing hypotheses on effects of differences in coinsurance and deductibles and fee-for-service compared with group practice and of differences in use of medical care services on health status in general populations.

Families and Intimate Relationships - Gloria W. Bird 1994

Although based on Melville's "Marriage and Family Today", this edition has been re-organized to reflect the diversity of families in society. The new material is research-oriented and includes chapters on power and family violence, stress, interpersonal lifestyles and single-parent families.

Sense of Coherence and Resiliency - Hamilton I. McCubbin 1994

Parenthood and Parenting in Croatia - Zvezdan Penezic 2015-01-01
Parental behavior and the experience of parenthood have been areas of study worldwide for the last hundred years (and in Croatia for about forty years). Researchers started with the exploration of parental behavior and parenting styles, but a few decades later the research was broadened to include the experience of parenthood. Previously, when developmental psychology generally meant child psychology, the parenting phenomenon was hardly observed. After developmental psychology became a lifetime phenomenon, parenting was studied in all developmental stages. However, the first phase of parenting is still dominant in research. This fact is reflected in the contents of this monograph, which is a representative of Croatia's most important theoretical and empirical research. The results of some of the research included have had a significant impact on social institutions that deal with issues of family, education and health. Special characteristics in the above mentioned research are: a) Earlier research, which was conducted

mainly among mothers, was recently replaced by studies that include joint maternal and paternal influences and their distinct impact on the development of children as well as the effects of parental conflicts on the psychosocial functioning of children. b) Research of parenting and parenthood using a recent theoretical approach to parenting as well as the theory based research designs. c) Critical observations about the shortcomings in published research are presented while future directions of research are proposed.

Ensuring Quality Cancer Care - Institute of Medicine and National Research Council 1999-07-21

We all want to believe that when people get cancer, they will receive medical care of the highest quality. Even as new scientific breakthroughs are announced, though, many cancer patients may be getting the wrong care, too little care, or too much care, in the form of unnecessary procedures. How close is American medicine to the ideal of quality cancer care for every person with cancer? *Ensuring Quality Cancer Care* provides a comprehensive picture of how cancer care is delivered in our nation, from early detection to end-of-life issues. The National Cancer Policy Board defines quality care and recommends how to monitor, measure, and extend quality care to all people with cancer. Approaches to accountability in health care are reviewed. What keeps people from getting care? The book explains how lack of medical coverage, social and economic status, patient beliefs, physician decision-making, and other factors can stand between the patient and the best possible care. The board explores how cancer care is shaped by the current focus on evidence-based medicine, the widespread adoption of managed care, where services are provided, and who provides care. Specific shortfalls in the care of breast and prostate cancer are identified. A status report on health services research is included. *Ensuring Quality Cancer Care* offers wide-ranging data and information in clear context. As the baby boomers approach the years when most cancer occurs, this timely volume will be of special interest to health policy makers, public and private healthcare purchasers, medical professionals, patient advocates, researchers, and people with cancer.

Assessment of Childhood Disorders, Fourth Edition - Eric J. Mash 2012-08-22

Who's Pulling Your Strings?: How to Break the Cycle of Manipulation and Regain Control of Your Life - Harriet Braiker 2003-09-22

A powerful program to stop manipulators in their tracks In *Who's Pulling Your Strings?*, Dr. Harriet B. Braiker, New York Times bestselling author of *The Disease to Please*, explains how depression, low self-esteem, anger, and feelings of helplessness can be caused by relationships with manipulative people. She exposes the most common methods of manipulators, and with the help of selfassessment quizzes, action plans, and how-to exercises, she helps you recognize and end the manipulative cycle for good.

Responses to Victimizations and Belief in a Just World - Leo Montada 2013-03-09

The preparation of this volume began with a conference held at Trier University, approximately thirty years after the publication of the first *Belief in a Just World (BJW)* manuscript. The location of the conference was especially appropriate given the continued interest that the Trier faculty and students had for BJW research and theory. As several chapters in this volume document, their research together with the other contributors to this volume have added to the current sophistication and status of the BJW construct. In the 1960s and 1970s Melvin Lerner, together with his students and colleagues, developed his justice motive theory. The theory of *Belief in a Just World (BJW)* was part of that effort. BJW theory, meanwhile in its thirties, has become very influential in social and behavioral sciences. As with every widely applied concept and theory there is a natural develop mental history that involves transformations, differentiation of facets, and efforts to identify further theoretical relationships. And, of course, that growth process will not end unless the theory ceases to develop. In this volume this growth is reconstructed along Furnham's stage model for the development of scientific concepts. The main part of the book is devoted to current

trends in theory and research.

Public Health and Informatics - J. Mantas 2021-07

For several years now, both eHealth applications and digitalization have been seen as fundamental to the new era of health informatics and public health. The current pandemic situation has also highlighted the importance of medical informatics for the scientific process of evidence-based reasoning and decision making at all levels of healthcare. This book presents the accepted full papers, short papers, and poster papers delivered as part of the 31st Medical Informatics in Europe Conference (MIE 2021), held virtually from 29-31 May 2021. MIE 2021 was originally due to be held in Athens, Greece, but due to the continuing pandemic situation, the conference was held as a virtual event. The 261 papers included here are grouped into 7 chapters: biomedical data, tools and methods; supporting care delivery; health and prevention; precision medicine and public health; human factors and citizen centered digital health; ethics, legal and societal aspects; and posters. Providing a state-of-the-art overview of medical informatics from around the world, the book will be of interest to all those working with eHealth applications and digitalization to improve the delivery of healthcare today.

Personality and Psychopathology - C. Robert Cloninger 1999

It analyzes the association between personality and psychopathology from several interlocking perspectives -- descriptive, developmental, etiological, and therapeutic -- concluding that the association is strong and important, no matter what angle it is considered from.

Identity Development - Jane Kroger 2007

The Second Edition of *Identity Development: Adolescence Through Adulthood* presents an overview of the five general theoretical orientations to the question of what constitutes identity, as well as the strengths and limitations of each approach. The volume then proceeds to describe key biological, psychological, and contextual issues during each phase of adolescence and adulthood.

Summer School in the Study of Old Books - Mirna Willer 2010

Društvena istraživanja - 2009

Close Relationships - Patricia Noller 2013-05-13

Close Relationships: Functions, Forms and Processes provides an overview of current theory and research in the area of close relationships, written by internationally renowned scholars whose work is at the cutting edge of research in the field. The volume consists of three sections: introductory issues, types of relationships, and relationship processes. In the first section, there is an exploration of the functions and benefits of close relationships, the diversity of methodologies used to study them, and the changing social context in which close relationships are embedded. A second section examines the various types of close relationships, including family bonds and friendships. The third section focuses on key relationship processes, including attachment, intimacy, sexuality, and conflict. This book is designed to be an essential resource for senior undergraduate and postgraduate students, researchers, and practitioners, and will be suitable as a resource in advanced courses dealing with the social psychology of close relationships.

Existential and Spiritual Issues in Death Attitudes - Adrian Tomer 2013-05-13

In this new volume, death is treated both as a threat to meaning and as an opportunity to create meaning.

Putting Emotional Intelligence To Work - David Ryback 2012-09-10

Putting Emotional Intelligence to Work offers a new paradigm of communication for the 21st-century workplace. Beginning with the thoughts of communication pioneer Carl Rogers, this book covers the origins and history of emotional intelligence, why it is essential at this

point in the changing marketplace, how to delegate and negotiate more effectively, and how to change yourself to become a more effective player. An EQ (Emotional Quotient) survey helps you determine where you are on the scale of executive intelligence. Putting Emotional Intelligence to Work leaves you with a greater understanding of the new work ethic for 21st-century leadership, its business and personal benefits, how to teach it in a corporate setting, and how to build self-managed teams with the right mix and match of personality types. Dr. Ryback's book brings many resources together to consolidate an approach to business that combines the practical with the thoughtful, emotional, and intuitive. A new paradigm for leadership in the 21st century is demonstrated clearly and incisively. David Ryback, Ph.D. is a management consultant and speaker on personal and organizational success. His experience encompasses business management and government consulting, as well as teaching at Emory University's School of Business. His diverse client base includes the US Department of Defense, government legal offices, financial institutions, manufacturers_ both domestic and international, health care organizations, and national retail outlets. In Putting Emotional Intelligence to Work, Dr. Ryback brings many resources together to consolidate an approach to business that combines the practical with the thoughtful, emotional, and intuitive. A new paradigm for leadership in the 21st century is demonstrated clearly and incisively.

Stress Management for Wellness - Walter E. Schafer 2000

This book provides students with readable, accessible, and easily-applied ideas and guidelines based on sound research evidence for enhancing personal wellness and the wellness of others through effective stress management. The writing style is reader-friendly, and includes many examples and personal application opportunities. It deals with central issues in the lives of today's students. This book is comprehensive, covering a wide range of topics in the stress management and wellness fields.

Eastern European Perspectives on Emotional Intelligence - Lada Kaliská
2021-02-23

This book offers a unique perspective on Emotional Intelligence (EI) research in Eastern Europe, analyzing current trends in the research and application of EI in a region with a distinct socio-political history. Bringing together leading researchers from seven countries, namely Bulgaria, Croatia, Lithuania, Serbia, Slovakia, Poland, and Russia, chapters within this edited volume present original research that illustrates both the etic and emic aspects of emotions, to discuss how EI research can address psychosocial challenges across different societies. Using a selection of cross-cultural frameworks for comparison, contributors to the volume make important developments to the field of EI research by instating a cultural and regional adaptation of EI theories. This includes considerations of EI from a collectivistic perspective as well as the relevance of creating psychological measurement tools that reflect and represent the cultural and linguistic nuances in the adaptive use of emotional information. Eastern European Perspectives on Emotional Intelligence will prove a valuable resource for academics, researchers, and students of cultural and social psychology, or particularly for those seeking to expand their conceptual understanding of EI.

Horizons in Neuroscience Research - Andres Costa 2014-03

This compilation presents original study results on the leading edge of neuroscience research. Each article has been carefully selected in an attempt to present substantial research results across a broad spectrum. Included in this volume are study results on the role of injured nerve-derived COX2/PGE2/EP signalling in the genesis of neuropathic pain; cannabinoid receptor- and metabotropic glutamate receptor-mediated signalling in neural circuits of the main olfactory bulb; cell replacement therapy in neuromuscular and neurodegenerative diseases; nociceptive circuitry in the anterior cingulate cortex in rodents; effects of hearing aid amplification on phase coherence of cortical auditory event-related potentials; thermal response of a motoneuron cluster; anterior cingulate cortex as a monitoring attentional system and its novel role in the unawareness of Alzheimer's disease; the role of rat anterior cingulate cortex in signal detection; distractor interference in visual motor tasks; and nervous excitability dynamics in a multisensory syndrome and its

similitude with normals.

The Global Seafarer - Organisation internationale du travail 2004

This volume offers a systematic account of the effects of globalization on the shipping industry and seafarers' lives. The seafarers' labor market is changing rapidly and this study discusses the challenges encountered in recruitment practices, trade unions, and collective bargaining, as well as training, certification, and fraudulent certification. Wages, contracts, and tours of duty are also investigated, and the book includes in-depth treatment of seafarer safety and hazard exposure. Innovations such as automated engine rooms and the global maritime distress and safety system, the internationalization of ship registrations, multinational crewing and reductions in crewing levels, and the rise in ship management companies have had a profound effect on seafarers' living and working conditions. This perceptive book examines these and future issues for regulation and enforcement.

The Impact of ICT on Quality of Working Life - Christian Korunka

2014-04-25

This book discusses the impact and effects of Information and Communication Technologies (ICT) on quality of working life of employees. It describes the changes and the acceleration of processes caused by the widespread use of ICT in a broad range of working areas and in different national contexts. It explores the important role ICT has come to play in nearly all work places in developed societies and the impact it is starting to have on work places in developing countries. The book brings together experts from the fields of ICT and quality of working life and from a variety of backgrounds and disciplines, including sociology, psychology, industrial engineering and macro ergonomics. It discusses the range of current positive and negatives effects as well as the possible increase of both kinds of effects in the future. The final chapter of the book integrates the diverse perspectives of the authors and gives recommendations on how to increase the possible positive outcomes and to diminish negative effects of ICT in an accelerated society.

Perfectionism, Health, and Well-Being - Fuschia M. Sirois

2015-09-14

This book brings together the world's leading perfectionism researchers and theorists to present their latest findings and ideas on how and why perfectionism may confer risks or benefits for health and well-being, as well as the contexts which may shape these relationships. In addition to providing an overview of the latest research in this field, this volume explores new conceptual models that may help further our understanding of when, how, and why perfectionism may be implicated in health and well-being. After presenting an overview of the conceptual and measurement issues surrounding the concepts of perfectionism, health, and well-being, three sections address the implications of perfectionism for health and well-being. The first of these sections provides an overview of research and theory on the role of perfectionism in health and illness, health behaviors, and chronic illness. The next section of the book focuses on the cognitive and affective underpinnings of perfectionism as they relate to psychopathology, distress, and well-being, including how it applies to eating disorders, depression, and anxiety. The final section of the book explores specific contexts and how they may contour the associations of perfectionism with health and well-being, such as in the domains of interpersonal relationships, academic pursuits, and work-related settings. Perfectionism and wellbeing is a topic not just for researchers and scholars, but clinicians and practitioners as well. For this reason, chapters also include a discussion of prevention and treatment issues surrounding perfectionism where relevant. By doing so, this volume is an important resource for not only researchers, but also for those who may wish to use it in applied and clinical settings. By presenting the latest theory and research on perfectionism, health, and well-being with a translational focus, *Perfectionism, Health, and Well-Being* makes a unique and significant contribution to perfectionism as well as general wellness literature, and highlights the need to address the burden of perfectionism for health and well-being. .

Outliving the Self - John N. Kotre 1996

Using dramatic personal narratives, Kotre expands upon Erik Erikson's concept of generativity. This concept means the variety of ways people

find to be fertile in their lives, from the biological task of leaving a genetic legacy, to the emotional work of nurturing and guiding children, to teaching practical skills, transmitting values, and attempting to enrich their culture.

War, Community, and Social Change - Dario Spini 2013-08-13

Collective experiences in the former Yugoslavia documents and analyses how social representations and practices are shaped by collective violence in a context of ethnic discourse. What are the effects of violence and what are the effects of collectively experienced victimisation on societal norms, attitudes and collective beliefs? This volume stresses that mass violence has a de- and re-structuring role for manifold psychosocial processes. A combined psychosocial approach draws attention to how most people in the former Yugoslavia had to endure and cope with war and dramatic societal changes and how they resisted and overcame ethnic rivalry, violence and segregation. It is a departure from the mindset that depict most people in the former Yugoslavia as either blind followers of ethnic war entrepreneurs or as intrinsically motivated for violence by deep-rooted intra-ethnic loyalties and inter-ethnic animosities.

Postpartum Depression and Child Development - Lynne Murray 1999-07-01

One in ten women suffers from an episode of significant depression following the birth of a baby. These depressions can have a profoundly negative effect on the quality of the mother infant relationship and, in turn, on the course of child development itself. The first book in a decade to deal exclusively with the impact of postpartum depression on child development, this groundbreaking volume brings together rigorous and sophisticated research from eighteen of the leading authorities in the field.

Spirituality and Aging - Robert C. Atchley 2009-03

Separating spirituality from religion--something few books on this topic do--Spirituality and Aging offers a plan for incorporating spirituality into gerontological scholarship, research, education, and practice.

Motherhood and Mental Health - I. F. Brockington 1996

This text examines the great variety of mental health disorders that can affect women during pregnancy and after giving birth. Issues such as infertility and child abuse are covered and case descriptions and personal accounts are also provided.

Interpersonal Relationships and Health - Christopher Rolfe Agnew 2014
Gathering leading thinkers in social and clinical psychology, public health, medicine, and sociology, *Interpersonal Relationships and Health* considers theoretical and empirical issues relevant to understanding the social and clinical psychological mechanisms linking close relationship processes with mental and physical health outcomes. The volume arises out of a recent explosion of interest, across multiple academic and research fields, in the ways that interpersonal relationships affect health and well-being. This volume pulls together a range of scholars who focus on different aspects of relationships and health in order to encourage both collaboration and cross-disciplinary initiatives. This is the first edited volume to pull together noted experts across myriad disciplines whose research is at the intersection of human relationships and health. Topics addressed include key biological processes that influence and, in turn, are influenced by close relationships. *Interpersonal Relationships and Health* presents research that demonstrates the connections between interpersonal relationships, mental and physical health outcomes, and biophysical markers that figure prominently in the fields of psychoneuroimmunology, endocrinology, and cardiology. In addition, it highlights recent work on marital, family, and social relationships and their interplay with health and well-being. Chapters also address sexual health among young and older adults, as well as clinical intervention efforts that focus on the role of relational factors in influencing health. Each chapter highlights extant theoretical and empirical findings and suggests future avenues for research in this burgeoning area.

The Neurobiology of Trust - Frank Krueger 2021-12-16

This is a multi-disciplinary introduction to the study of trust, written by experts from the social, behavioural, and neural sciences.

Coping - C. R. Snyder 1999

Like health, the ability to cope often goes unappreciated until it's too

late. This volume, breaking from the traditional focus on pathology, takes a preventative approach, focusing on new ways to improve people's ability to cope with mental stress. This award-winning research emphasizes the role of people as positive copers. The volume collects work by leading experts and includes new research. It explores a wide variety of topics, including reality negotiation, confessing through writing, emotional intelligence, optimism, hope, mastery-oriented thinking, and more. The book will be an invaluable resource for mental health professionals, as well as a useful guide for general readers.

Ensuring Quality Cancer Care Through the Oncology Workforce - Institute of Medicine 2009-04-28

The American Society of Clinical Oncology (ASCO) predicts that by 2020, there will be an 81 percent increase in people living with or surviving cancer, but only a 14 percent increase in the number of practicing oncologists. As a result, there may be too few oncologists to meet the population's need for cancer care. To help address the challenges in overcoming this potential crisis of cancer care, the National Cancer Policy Forum of the Institute of Medicine (IOM) convened the workshop *Ensuring Quality Cancer Care through the Oncology Workforce: Sustaining Care in the 21st Century* in Washington, DC on October 20 and 21, 2008.

Emotion and Performance - Neal M. Ashkanasy 2021-12-17

In this special issue, five papers address the study of emotions from a variety of viewpoints. Two are theoretical essays that deal respectively with emotion and creativity and the relationships between individual and team performance. Three are empirical studies that canvas the emotion-performance nexus across levels of analysis: within-person, between-person, and in groups. Between them, the five papers present a strong case for the nexus of emotions and performance, but more importantly provide a platform for potentially fruitful future research in this burgeoning area.

Emotional Intelligence - María del Mar Molero Jurado 2018

The concept of Emotional Intelligence (EI) was used by Salovey and Mayer to refer to the abilities and capacities to perceive and produce

emotions that enable thought, to understand those emotions and regulate them with a clear adaptive function of the individual. This plays an important role throughout life, offering a frame of reference for the management of emotions with which a person relates to their environment. According to the different researches, emotional intelligence has been related to subjective well-being, personal, labor and psychological well-being, health perception and related behaviors, the socio-scholar adjustment of students, job or academic satisfaction, and the link with studies, social skills, etc. Therefore, it deserves attention, research, development and control in order to achieve a society better prepared for individual and collective success. The conceptual paradigm of intelligence has evolved over time, focusing on a multidisciplinary and integrating perspective in the present. Therefore, this book captures the results of some of the recent research that is being carried out on this construct from a multidisciplinary approach (educational, organizational, development, etc.) and throughout life (childhood and adolescence, adulthood, etc.).

Life Events and Illness - George William Brown 1989-01-01

The role of factors outside the province of the physical and biological sciences in the onset of illness has long been a source of speculation. While early efforts in psychosomatic medicine focused on the relationship between mental states and illness, the effects of personal status and social circumstances on physical health are only now receiving the attention they merit. By integrating current theory, methodology, and research, this ground-breaking volume advances the study of life events and disease to a new stage. George Brown and Tirril Harris are ideal editors for such an undertaking. George Brown has long been known for his path-breaking work on intensive clinical assessment and designing measures that capture the real complexity of social situations, assigned meanings, and personal response to crisis. He brought to light the importance of 'expressed emotion,' the differential role of life events in schizophrenia and depression, and most recently, produced a seminal work on the social etiology of depression with Tirril Harris. As David Mechanic notes in his Foreword, the defining

characteristics of these efforts, which are also reflected in this volume are a ``sensitivity to clinical material and capitalizing on serendipity; self-consciousness about methods and methodological advances; and focus on theory with careful efforts to specify intervening processes and the links between macro events and personal meanings.' Along with their collaborators, these eminent editors bring together an impressive range of theoretical thought and empirical study organized around the Life Events and Difficulties Schedule (LEDS). Their examination of the origins of life events and difficulties and the notion of ``conveyor belts' to continuing adversity capture the immutable uncertainties of life and help to link concerns with life events and disease to larger issues of human development. The authors' innovative approach to establishing the relationship between ``attitudes' and psychiatric and physical disorders fully utilizes the wealth of data elicited by the LEDS, and demonstrates how the comprehensiveness of this data matches the sophistication and complexity of the theoretical ideas it serves. Addressing fundamental questions on the whether the specific nature of life events and vulnerability factors differ in different disorders, the authors conclude by providing a perspective on psychodynamic etiology which emphasizes the specificity of crucial links. It integrates social, psychological, and biological factors around the notion that specific types of cognitive-affective experience are linked to specific types of illness. While significantly advancing our understanding of how individuals define and deal with adversity, LIFE EVENTS AND ILLNESS also fosters a greater appreciation of the methodological tools available for examining these processes. For all clinicians, researchers, and students in the behavioral sciences, this timely work not only provides a comprehensive review of the literature and a critical examination of current research models but also points the way for future investigations.

Key Sociological Thinkers - R. Stones 1998-10

A clear and manageable overview of major sociological developments for the lay reader Despite the fact that most of us think often about society and social life, few of us have had extensive schooling in how to organize or structure such thought. Guided by the belief that the sociological

imagination is impoverished if accessible only to a handful of specialists, *Key Sociological Thinkers* provides the lay reader with a clear and manageable overview of the major sociological developments from Marx to the present day. Twenty-one concise, thorough chapters introduce the key thinkers in the field; their driving impulses, issues central to their work, substantive examples of the theory in action, their legacy, as well as reading lists meant to stimulate further research. The book's range includes not only canonical figures, such as Marx, Weber, and Durkheim, but feminist, post-structuralist, and post-colonialist thinkers of recent decades, including Nancy Chodorow, Michel Foucault, and Stuart Hall. Other sociologists and social theorists covered include Sigmund Freud, Georg Simmel, Herbert Blumer, Talcott Parsons, Robert Merton, Simone de Beauvoir, Norbert Elias, Erving Goffman, David Lockwood, Harold Garfinkel, Louis Althusser, Jurgen Habermas, Pierre Bourdieu, Arlie Hochschild, and Anthony Giddens. *Key Sociological Thinkers* is ideal for students new to the field, veterans looking to brush up, and anyone eager to expand their understanding of the world in which we live.

Burnout, Fatigue, Exhaustion - Sighard Neckel 2017-06-19

This interdisciplinary book explores both the connections and the tensions between sociological, psychological, and biological theories of exhaustion. It examines how the prevalence of exhaustion - both as an individual experience and as a broader socio-cultural phenomenon - is manifest in the epidemic rise of burnout, depression, and chronic fatigue. It provides innovative analyses of the complex interplay between the processes involved in the production of mental health diagnoses, socio-cultural transformations, and subjective illness experiences. Using many of the existing ideologically charged exhaustion theories as case studies, the authors investigate how individual discomfort and wider social dynamics are interrelated. Covering a broad range of topics, this book will appeal to those working in the fields of psychology, sociology, medicine, psychiatry, literature, and history.

Silencing the Self Across Cultures - Dana C. Jack 2010-04-28

Winner of the 2011 Ursula Gielen Global Psychology Book Award! This award is presented by APA Division 52 to the authors or editors of a book

that makes the greatest contribution to psychology as an international discipline and profession. This international volume offers new perspectives on social and psychological aspects of depression. The twenty-one contributors hailing from thirteen countries represent contexts with very different histories, political and economic structures, and gender role disparities. Authors rely on Silencing the Self theory, which details the negative psychological effects that result when individuals silence themselves in close relationships, and the importance of social context in precipitating depression. Specific patterns of thought on how to achieve closeness in relationships (self-silencing schema) are known to predict depression. This book breaks new ground by demonstrating that the link between depressive symptoms and self-

silencing occurs across a range of cultures. Silencing the Self Across Cultures explains why women's depression is more widespread than men's, and why the treatment of depression lies in understanding that a person's individual psychology is inextricably related to the social world and close relationships. Several chapters describe the transformative possibilities of community-driven movements for disadvantaged women that support healing through a recovery of voice, as well as the need to counter violations of human rights as a means of reducing women's risk of depression. Bringing the work of these researchers together in one collection furthers international dialogue about critical social factors that affect the rising rates of depression around the globe.
