LEAN AND AGILE MANUFACTURING - S. R. DEVADASAN 2012-06-12
Contemporary fastidious companies are required to eliminate wastes and offer value-added products and services to the customers, which requirement is fulfilled by adopting the paradigm called 'lean manufacturing'. On the other side, futuristic companies surge towards reaching the twenty-first century mission by reacting quickly in accordance with the dynamic demands of the modern customers, for which researchers have been developing a paradigm called 'agile manufacturing'. Although various techniques and tools are applied, cohesive procedures are yet to be evolved to implement these paradigms systematically and successfully in companies. In this context, this book is evolved to address students, academics, practitioners and researchers for gaining theoretical, practical and research futuristic knowledge on lean and agile manufacturing paradigms. Organised in 18 chapters, the text opens with a historical overview of lean and agile manufacturing paradigms. It then discusses the lean manufacturing principles with their application procedures. The book comprehensively analyses the methods of implementation of lean manufacturing paradigm in both traditional and moderate organisations. It also gives an equal treatment to the implementation of agile manufacturing paradigm under four drivers such as management driver, technology driver, manufacturing strategy driver

and competition driver through the adoption of appropriate agile manufacturing criteria. The book concludes with a discussion of lean and agile manufacturing paradigms from the perspectives of academia, researchers and practitioners. The text is well supported by a large number of self-test questions with their answers. A unique feature of the book is the inclusion of research avenues at the end of each chapter, which enable the readers to carry out researches on these paradigms. This book is intended for the undergraduate and postgraduate students of industrial, manufacturing, production and mechanical engineering.

A focus on the evolving fields of data science and neuroscience is a driving force for both researchers and the people they study. These digital and mobile technologies have enabled researchers to augment listening, observing and categorizing methods, and to adapt new techniques in attempting to better understand consumers. On the other hand, digitized mobile societies, spurred by faster and cheaper internet access, emphasize an interconnectedness that drastically alters human behaviors and creates borderless influences. Even so, the tenets and approaches to insightful deep learning for consumers and other actors, from discovery through to the launch of successful products, remains an intrinsic part of assessing the market. Product Innovation Toolbox brings together key thought leaders and seasoned consumer researchers from corporate R&D, academia, and marketing research companies to share their experiences, advanced consumer research tools and practical tips for successful and sustainable product innovation. By offering these leading-edge tools and insights, the book ensures consumer-centric innovation by linking strategy and a designed approach. The new edition focuses on the integration and connection of all data—both structured

and unstructured??for deep learning and activation, rather than a differentiated qualitative—quantitative approach, reflecting the shifting relationships involved in the latest developments in the field. The second edition of Product Innovation Toolbox also includes: Revised material for more than 70% of the manual, with 11 new and extensively updated chapters New tools sections on digital technologies to create novel ways to stimulate and elicit insights from participants, such as Virtual Reality (VR) and Digital Augmentation Upgraded versions of tools in each updated section, with fresh examples New case studies created using the tools from the previous edition, including cases regarding cross-continental marketplaces and cross-cultural societies An emphasis on tools with global applications Product Innovation Toolbox is an essential resource for product developers, marketers, and technologists.

Research Skill Development in Social Sciences, Communication and Management - Dr. B.S. Nagi 2021-07-03

In a series of 100 mini workshops on proposal development during one month training of senior professionals on research methodology, orientation and refresher training of faculty from universities and colleges, and analysis of data of more than 5000 Ph.D scholars and national level projects by the authors of this book, several pitfalls emerged in the selection of research area and topic/title of a study, objectives, hypothesis formulation, research design, development of research tools, and analysis of data. The errors committed at planning stage of research continue throughout the research work and get its serious reflection in the quality of research. During the training, the presentation of Research Proposals developed as part of individual and group assignments reinforced the faith of authors that the skills required for quality research are missing in the system. And it cannot be fully overcome through the tutorial methodology. The knowledge about the research process is crucial but not sufficient to enrich the research skills for quality research. It was realized that most of the books do not explain

how to decide the research area and title of a study? How to set the objectives and how to establish relationship between two? These two features not independent constructs and should be mirror of each other. How to ensure the quality in the review of literature? How should it be carried out? How to find research gaps and how to set research questions to be answered in the research studies? How to formulate correct hypothesis, decide the research design, and develop research tools? How and from where to pick up variables for developing the research tools? How much crystallization of each objective helps researchers to get items for developing the tools such as questionnaire, interview schedule, check list for observation, and measurement scale for attitude, perception, belief, etc. about the phenomenon under exploration. What type of statistical tools are used for data analysis? In-depth understanding of these sub-steps under each stage of research looks to be bigger area of confusion for researchers. The book on Research Skill Development in Social Sciences, Communication and Management has been written in the self-guide form to answer the issues listed above

Research Methodology in Social Science - Arvind Kumar 2002

Yet Research May Be Regarded As A Useful Form Of Activity. Research, In The Sense Of Development, Elaboration And Refinement Of Principles, Together With The Collection And Use Of Empirical Materials To Help In These Processes, Is One Of Die Highest Activities Of A University And One In Which All Its Professors Should Be Engaged. Research Need Not Be Thought Of As A Special Prerogative Of Young Men And Women Preparing Themselves For A Higher Degree. Nobody Needs The Permission Of A University To Do Research And Many Of The Great Scholars Did Not Any Research In The Ordinary Sense Of The Term. Yet They Succeeded In Contributing Significantly To The Existing Realms Of Knowledge. Research Is A Matter Of Realising A Question And Then Trying To Find An Answer. In Other Words, Research Means A Sort Of Investigation Describing The Fact That Some Problem Is Being Investigated To Shed For Generalization. Therefore, Research Is The Activity Of Solving Problem Which Adds New Knowledge And Developing Of Theory As Well As Gathering Of Evidence To Test Generalization. In View Of This, The Present Attempt Is Made To Describe The Different Aspects Of Research Generally Being Conducted By The Social Scientists And It Is Hoped That It Will Be Of Great Use For All Those Concerned With Social Research.

Single Subject Research Methodology in Behavioral Sciences - Jennifer R. Ledford 2009-10-16

This book is written for student researchers, practitioners, and university faculty who are interested in answering applied research questions and objectively evaluating educational and clinical practices. The basic tenet of single-subject research methodology is that the individual is of primary importance and that each individual study participant serves as his or her own control. It is because of this focus on the individual that

clinicians and educators have been using single-subject research designs for over 40 years to answer applied research questions.
