IBM FlashSystem 5200 Product Guide - Aldo Araujo Fonseca 2022-07-22

This IBM® Redbooks® Product Guide publication describes the IBM FlashSystem® 5200 solution, which is a next-generation IBM FlashSystem control enclosure. It is an NVMe end-to-end platform that is targeted at the entry and midrange market and delivers the full capabilities of IBM FlashCore® technology. It also provides a rich set of software-defined storage (SDS) features that are delivered by IBM Spectrum® Virtualize, including the following features: Data reduction and deduplication Dynamic tiering Thin provisioning Snapshots

Cloning Replication Data copy services
Transparent Cloud Tiering IBM HyperSwap®
including 3-site replication for high availability
(HA) Scale-out and scale-up configurations
further enhance capacity and throughput for
better availability. The IBM FlashSystem 5200 is
a high-performance storage solution that is
based on a revolutionary 1U form factor. It
consists of 12 NVMe Flash Devices in a 1U
storage enclosure drawer with full redundant
canister components and no single point of
failure. It is designed for businesses of all sizes,
including small, remote, branch offices and
regional clients. It is a smarter, self-optimizing
solution that requires less management, which
enables organizations to overcome their storage
challenges. Flash has come of age and price
point reductions mean that lower parts of the
storage market are seeing the value of moving
over to flash and NVMe--based solutions. The
IBM FlashSystem 5200 advances this transition
by providing incredibly dense tiers of flash in a
more affordable package. With the benefit of
IBM FlashCore Module compression and new
QLC flash-based technology becoming available,
a compelling argument exists to move away from
Nearline SAS storage and on to NVMe. With the
release of IBM FlashSystem 5200 Software V8.4,
extra functions and features are available,
including support for new Distributed RAID1
(DRAID1) features, GUI enhancements, Redirect-
on-write for Data Reduction Pool (DRP)
snapshots, and 3-site replication capabilities.
This book is aimed at pre-sales and post-sales
technical support and marketing and storage
administrators.

IBM IMS Solutions for Automating Database Management - Paolo Bruni 2014-12-09

Over the last few years, IBM® IMSTM and IMS tools have been modernizing the interfaces to IMS and the IMS tools to bring them more in

line with the current interface designs. As the mainframe software products are becoming more integrated with the Windows and mobile environments, a common approach to interfaces is becoming more relevant. The traditional 3270 interface with ISPF as the main interface is no longer the only way to do some of these processes. There is also a need to provide more of a common looking interface so the tools do not have a product-specific interface. This allows more cross product integration. Eclipse and web-based interfaces being used in a development environment, tooling using those environments provides productivity improvements in that the interfaces are common and familiar. IMS and IMS tools developers are making use of those environments to provide tooling that will perform some of the standard

DBA functions. This book will take some selected processes and show how this new tooling can be used. This will provide some productivity improvements and also provide a more familiar environment for new generations DBAs. Some of the functions normally done by DBA or console operators can now be done in this eclipse-based environment by the application developers. This means that the need to request these services from others can be eliminated. This IBM Redbooks® publication examines specific IMS DBA processes and highlights the new IMS and IMS tools features, which show an alternative way to accomplish those processes. Each chapter highlights a different area of the DBA processes like: PSB creation Starting/stopping a database in an IMS system Recovering a database Cloning a set of databases
